

Fertility clinic referrals from Maven

Through Maven, your designated Care Advocate can find and refer you to high-quality, inclusive fertility clinics.

How does Maven determine a fertility clinic's quality?

We only partner with fertility clinics that meet or exceed our clinical success metrics based on data from the Society for Assisted Reproductive Technology (SART) and the Centers for Disease Control and Prevention (CDC).

What are the success metrics Maven looks for when partnering with a fertility clinic?

We partner with fertility clinics that meet or exceed the following success metrics:

- ✓ Mean number of embryos transferred **<2.0**
- ✓ Average singleton live birth rates **>35% for age <35**
- ✓ Annual cycle volume of **100+**

In addition to these clinical measures, we examine FertilityIQ ratings and qualitative reviews from our members to incorporate patient satisfaction when determining clinic partnerships.

How extensive is Maven's fertility clinic network?

Maven's fertility clinic network includes 650+ locations across the US, and over 2,200 locations globally across 60+ countries.

With our network, fertility clinic partners offer Maven members discounts and preferred appointment scheduling.

Every member receives a custom referral list of fertility clinic options from their designated Care Advocate, no matter where they are located or seeking fertility care.
